

Secure Your Electronics – Lock em’ Down and Go to Sleep

By Bernard Williams, Outdoor Writer

I’ve used RAM marine mounting systems for years. They’re easy to install, sturdy and allow you to easily remove your expensive electronics for safe keeping. I like the fact that they let you reposition the unit at will to any viewing angle. They’re constructed with marine grade power-coated aluminum and stainless steel hardware. The premium rubber RAM balls allow for maximum vibration resistance. On top of that they come with a lifetime warranty. Just can’t beat that, no way.

I now find out that RAM makes mounts for almost every kind of electronic device made; from iPhones, Androids, GPS devices, Laptops, DLSR Cameras, GoPro Cameras, Radios and Printers to Keyboards, Tablets and iPads; surface or suction mounts; they have it all. Enough said, you know the story; that’s not what this article is about. It’s about the RAM Tamper Resistant Pin-Lock Security Knob and the Keyed Locking Knob.

You’ve just made a major investment in electronic equipment; you need to protect your investment.

RAM Mounts protect your device from damaging shock and vibration, but what about theft and tampering? RAM now offers a full collection of security products that guards your devices mounted on RAM mounts from theft and uninvited tampering. If you add the security knob or nut to your RAM mount, it will stop thieves from stealing your expensive electronic gear. The security knob will also stop users from altering or removing the

device.

The PIN-LOCK Security Knob is low profile and adds no additional bulk to your system. It costs only a

fraction of the price of other keyed locking knobs. It certainly adds peace of mind when leaving your electronics in public places. It’s available for gimbal mounted electronics. It’s affordable and simple to install.

When choosing a locking system, be sure you select one that can survive the harsh environments fishermen encounter. Extremely cold weather can wreak havoc on your mounting equipment. The Cold

Weather Wrench lets you give the arm and extra tight grip in very cold weather. It was initially made for military use when the knob could not be tightened by hand in cold weather. I don’t endorse products that don’t work; friends believe me when I say this is worth the investment. I can sleep sound knowing my costly electronics will be on the boat the next morning. Like I said earlier, Lock em’ Down and Go to Sleep. **Bernard**
